

BREWING

1. Insert a BUNN® filter into the funnel.

2. Pour in fresh coffee.

3. Shake funnel gently to level grounds.

4. Slide funnel into the funnel rails of the brewer.

5. Place an empty decanter under the funnel.

6. Press the "ON/OFF" switch (indicator glowing).

7. Momentarily press and release the "BREW" switch.

8. When brewing is complete, discard the grounds and filter.

CLEANING

1. Clean and sanitize the funnel. **NOTE:** Do NOT clean this equipment with a water jet device.

2. Use a clean damp cloth rinsed in mild, non-abrasive detergent to clean the sprayhead panel.

3. Remove the sprayhead.

4. Use the pointed end of spray-head cleaning tool to remove any mineral deposits from the sprayhead openings. The sprayhead openings must always remain open.

NOTE: Any buildup on the spray-head and fitting may restrict water flow, and impact your coffee brewing. For consistently great coffee, clean sprayheads and fittings weekly with sprayhead cleaning tool (#38227.0000). Upon visual inspection it may appear that light passes through all openings in the sprayhead, but a thin film of residue can pass light and still impede water flow.

5. Use the blunt end of spray-head cleaning tool to clean the sprayhead outlet fitting.

6. Re-install the sprayhead.
