**BUNN-O-MATIC COMMERCIAL PRODUCT WARRANTY**

Bunn-O-Matic Corp. (“BUNN”) warrants equipment manufactured by it as follows:

1) Airpots, thermal carafes, decanters, GPR servers, iced tea/coffee dispensers, thermal servers and ThermoFresh® servers (mechanical and digital) 1 year parts and 1 year labor.
2) All other equipment - 2 years parts and 1 year labor plus added warranties as specified below:
   a) Electronic circuit and/or control boards - parts and labor for 3 years.
   b) Compressors on refrigeration equipment - 5 years parts and 1 year labor.
   c) Grinding burrs on coffee grinding equipment to grind coffee to meet original factory screen sieve analysis - parts and labor for 4 years or 40,000 pounds of coffee, whichever comes first.

These warranty periods run from the date of installation BUNN warrants that the equipment manufactured by it will be commercially free of defects in material and workmanship existing at the time of manufacture and appearing within the applicable warranty period. This warranty does not apply to any equipment, component or part that was not manufactured by BUNN or that, in BUNN’s judgment, has been affected by misuse, neglect, alteration, improper installation or operation, improper maintenance or repair, non periodic cleaning and descaling, equipment failures related to poor water quality, damage or casualty. In addition, the warranty does not apply to replacement of items subject to normal use including but not limited to user replaceable parts such as seals and gaskets. This warranty is conditioned on the Buyer 1) giving BUNN prompt notice of any claim to be made under this warranty by telephone at (217) 529-6601 or by writing to Post Office Box 3227, Springfield, Illinois 62708-3227; 2) if requested by BUNN, shipping the defective equipment prepaid to an authorized BUNN service location; and 3) receiving prior authorization from BUNN that the defective equipment is under warranty.

THE FOREGOING WARRANTY IS EXCLUSIVE AND IS IN LIEU OF ANY OTHER WARRANTY, WRITTEN OR ORAL, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF EITHER MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. The agents, dealers or employees of BUNN are not authorized to make modifications to this warranty or to make additional warranties that are binding on BUNN. Accordingly, statements by such individuals, whether oral or written, do not constitute warranties and should not be relied upon.

If BUNN determines in its sole discretion that the equipment does not conform to the warranty, BUNN, at its exclusive option while the equipment is under warranty, shall either 1) provide at no charge replacement parts and/or labor (during the applicable parts and labor warranty periods specified above) to repair the defective components, provided that this repair is done by a BUNN Authorized Service Representative; or 2) shall replace the equipment or refund the purchase price for the equipment.

THE BUYER’S REMEDY AGAINST BUNN FOR THE BREACH OF ANY OBLIGATION ARISING OUT OF THE SALE OF THIS EQUIPMENT, WHETHER DERIVED FROM WARRANTY OR OTHERWISE, SHALL BE LIMITED, AT BUNN’S SOLE OPTION AS SPECIFIED HEREIN, TO REPAIR, REPLACEMENT OR REFUND.

In no event shall BUNN be liable for any other damage or loss, including, but not limited to, lost profits, lost sales, loss of use of equipment, claims of Buyer’s customers, cost of capital, cost of down time, cost of substitute equipment, facilities or services, or any other special, incidental or consequential damages.

INTRODUCTION

ITB

This equipment will brew tea into an awaiting dispenser or reservoir. It is only for indoor use on a sturdy counter or shelf. The ITB uses recipe settings to brew tea. It has an LCD for digital readout and programming. The user is able to select regular or quick brew for tea programming. Other features include Pre-Infusion and Pulse Brew, quick and standard brew, Energy Savings mode, BUNNLink compatible, Freshness Timer, Sanitation Alert, brew counters, and USB Flash Drive Programming Port. Available in low profile, dual dilution and sweetener models.

ITCB

This equipment will brew either tea or coffee into an awaiting dispenser or reservoir. It can be easily configured for 120V 15 amp, 120/208V 20 amp or 120/240V 20 amp. The brewer may have an auxiliary hot water faucet. It is only for indoor use on a sturdy counter or shelf.

The Infusion Series combines BrewWISE, CDBC and Tea Brewers into one. ITCB is able to brew both tea and coffee with recipe settings. It has an LCD for digital readout and programming along with the Smart Funnel options for coffee. The user is able to select regular or quick brew for tea programming. Other features include: Pre-Infusion, Pulse Brew, quick and standard brew, and BrewWISE, Energy Savings mode, BUNNLink compatible, Smart Reader compatible, Freshness Timer, Sanitation Alert, sweetener with low product detection and USB Flash Drive Programming Port.

COLUMN B
PROGRAMMING WITH AD CARD

Using an AD CARD to load ADS:
The information is loaded into the brewer’s memory by holding the chip area up to the brewer’s SENSING COIL.

NOTE: Instructions to program the brewer are printed on the AD CARD.

Procedure to program the AD:
1. Remove the funnel(s) if present.
2. Position the RECIPE CARD vertically, so that the top end of the CHIP is beneath the (Left on Twins) SENSING COIL (located on the underneath side of the front display panel).
3. After a short pause the display will read CARD CONTAIN ADS/SHOW-QUIT-SAVE.
4. To show (view) this information, select “SHOW”. The display will scroll through all of the ad on that chip. The display will then return to CARD CONTAIN ADS/SHOW-QUIT-SAVE.
5. If message is correct, press SAVE. The display will read AD MESSSAGE SETUP COMPLETE. The ad is now stored in the brewer’s memory.
6. If the ad is not correct, or it is desired to exit the setup before the ad is loaded into the brewer’s memory, press QUIT. The display will then return to the MAIN SCREEN.

NOTE: ENABLE ADS must be turned on in order for the newly programmed ad message to be displayed.
PROGRAMMING THE BREWER

BREW LOCKOUT
This function allows the operator to prevent or allow brewing if the water temperature is less than the set READY temperature.

Procedure for setting Brew Lockout:
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SETTINGS, then press SELECT. Press the right hidden button until the display reads BREW LOCKOUT:

   BREW LOCKOUT?
   NO     DONE    YES

   Press here for NO  Press here for DONE  Press here for YES

2. The YES or NO should be flashing. Select YES to prevent brewing if the water temperature is below the set READY temperature. Select NO to permit brewing at any water temperature.

3. When finished, select DONE. This will exit this function screen and return to the MAIN SCREEN.

PROGRAMMING FUNCTIONS
The functions in the second level of programming allow the operator to adjust brew settings and other feature options.

To access the level 2 function screens press and hold the right hidden button for approximately 5 seconds. Release when the display reads:

SET LANGUAGE
This function allows the operator to select the language used for the display.

Procedure for setting Language:
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SETTINGS, then press SELECT. Press the right hidden button until the display reads SET LANGUAGE?

2. Press YES to proceed. The display should now read ENGLISH. Using (-) and (+), scroll through the available languages until the desired language is shown on the display.

3. When finished, press SELECT. If the language selected is different from the current settings, the display will read CHANGE LANGUAGE? ARE YOU SURE? and then will change to CHANGE LANGUAGE? To convert the display to the new language, select YES. To retain the current language, select NO.

4. The display should now read UNITS. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.

(cont.)
PROGRAMMING THE BREWER (cont.)

PROGRAMMING FUNCTIONS (cont.)

UNITS
This function allows the operator to select if numeric settings are displayed in English or Metric units.

Procedure for setting the Units:
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SETTINGS, then press SELECT. Press the right hidden button until the display reads UNITS. The METRIC or ENG should be flashing.
2. Select METRIC to have settings displayed in Metric units. Select ENG for English units.

NOTE: Changing the UNIT settings will restore ALL settings to Factory Default.

3. Select DONE to advance to the next programming screen. To exit programming and return to the Main Screen, press ENABLE BREW ON/OFF switch.

NOTE: This manual is written based on Factory Default Settings (English Units). If brewer is set for Metric Units, displays will be different (ex: Brew oz will become Brew liters, Temperature changes from F° to C°).

3. Select **SHOW**. The screen will scroll through all the brew settings for that particular recipe. When finished, the display will return to the recipe name just viewed.
4. To see the settings again, select **SHOW**. To change settings, select **MODIFY**. Then the screen will display **BREW OZ** and a batch light will be blinking.
5. Using (-) or (+), set the amount of brew water to be dispensed for that batch size.
6. When finished, press the other batch size and repeat step #8.
7. When finished setting both batch sizes, select **DONE**. The display should read **2 BATCHES DONE?**
8. If both batch sizes are not correct press and release NO to return to the **BREW OZ** setup screen and repeat steps #8, 9 and 10.

* **ITB/ITCB/ITCB-DV/TWIN HV WITH FACTORY SWEETENER**
9. If both batch sizes are correct, press **YES**. This will advance to the **DILUTE OZ** (ITCB/HV) or **BYPASS %** (ICB/ITCB HV)
10. Using (-) or (+), set the amount of dilution water for that particular batch size to be dispensed through the dilution nozzle into the tea dispenser (ITCB/ HV) or % bypass water to be dispensed around the filter/grounds (ICB/ITCB HV).
11. When finished, press the other batch size and repeat step #10.
12. When finished setting both batch sizes, press and release **DONE**. The display should read **2 BATCHES DONE**?
13. If both batch sizes are not correct, select **NO** to return to the **BYPASS %** function (ICB) or **DILUTE OZ** function (ITCB/HV) and repeat steps #10-12.
14. If both batch sizes are correct, press **YES**. This will advance to the **DILUTE DELY** function (ITCB/HV) or **SET PULSE BREW** function (ICB/HV) jump to step # 21.
15. (ITB/ITCB/HV ONLY) Press and release **YES**. The display should now read **DILUTE DELY**: and a batch light will be blinking. Press and release the batch size to be modified.
16. Using (-) or (+), set the **time delay** for the dilution water to start for that particular batch size.
17. When finished, press the other batch size and repeat step # 16.
18. When finished setting both batch sizes, press and release **DONE**. The display should read **2 BATCHES DONE**?
19. If both batch sizes are not correct, press and release **NO** to return to the **DILUTE DELY** setup screen and repeat steps 16 - 18.
20. If both batch sizes are correct, press **YES**. The display should now read **SET PULSE BREW**.
21. To set **PULSE BREW** press **YES**. The display should now read **SELECT METHOD**. To set the **EASY** method, continue to step # 22. To set by **MANUAL** method, jump to step # 28.

**Setting Pulse Brew – EASY Pulse Brew**

Range: Minimum: will adjust to the minimum time required to brew that batch using the set brew volumes and flow rate for the sprayhead. Maximum – will adjust depending on settings and will always be minimum time + 3 minutes. The brewer will automatically calculate what the **1ST ON TIME**, **OFF TIMES**, and **LAST ON TIME** will be using **THE INITIAL ON TIME**, plus a 7 pulse routine.

22. Select **EASY**. With **EASY** flashing, select **NEXT**.
23. The display should now read **BREW TIME**: and a batch light will be blinking. Select the batch size to be modified.
24. Using (-) or (+), set the total brew time desired including spray times and off times.
25. When finished, press the other batch size and repeat step # 24.
26. When finished setting both batch sizes, press **DONE**. The display will show the pulse settings to accommodate the brew time entered. Press and release each batch size to display the settings for that batch. After a delay, the display should read **2 BATCHES DONE**?
27. If both batch sizes are not correct, press and release **NO** to return to the **BREW TIME** setup screen and repeat steps 24-26.

**Setting Pulse Brew/PreInfusion – MANUAL**

28. Select **MANUAL**. With **MANUAL** flashing, select **NEXT**.
29. The display should now read, **1st ON TIME** and a batch light will be blinking. Select the batch size to be modified.
30. Using (-) or (+), adjust the **1st ON TIME**.
31. When finished, press the other batch size and repeat step # 30.

**NOTE:** To disable pulse brew, set **1st ON TIME** to **OFF**. Brewer will automatically pulse on tea recipes with a brew volume greater than 86.0 oz.
32. When finished setting both batch sizes, press **DONE**.
33. The display should now read **OFF TIME**. Adjust the **OFF TIME** using (-) or (+).

( cont. )
34. When finished, press the other batch size and repeat step # 33.
35. When finished setting both batch sizes, press and release DONE.
36. The display should now read LAST ON:. Adjust the LAST ON TIME using (-) or (+). If PREINFUSION is desired, set the LAST ON TIME to Prel.
37. When finished, press the other batch size and repeat step # 36.
38. When finished setting both batch sizes, press and release DONE.
39. The display will show the three times just entered. Press and release each batch size to display the settings for that batch. If the 1ST ON TIME is set to OFF, the display will read PULSE BREW DISABLED. After a 5 second delay, the display will read 2 BATCHES DONE?
40. If both the pulse brew settings for both batch sizes are not correct, press and release NO to return to the 1ST ON TIME setup screen and repeat steps 24 through 39.
41. If both batch sizes are correct, press YES. The display should now read DRIP TIME.

Setting SWEET METER: Optional on ITCB
This function allows the operator to adjust the amount of sweetener added to the dilution water. The solenoid is pulsed on/off for the duration of the dilution cycle. Setting #1 will produce the least amount of sweetener (weakest) and (#14) being the most (strongest).

Procedure:
47. The display should now read "SWEETNER"
48. Press (-) to decrease the amount, or (+) to increase. (Range: 1 - 14)
49. When finished, press and release the right hidden switch, or press and release the "ENABLE BREW ON/OFF" switch to return to the main screen.

Setting DRIP TIME:
NOTE: Drip time also controls the solenoid on time for models with optional funnel locks.
42. The display should now read DRIP TIME, along with either the word OFF or a time showing. A batch light will also be blinking.
43. Using (-) or (+), set the amount of time from when the brew spray ends to when the funnel is emptied of hot liquid.
44. When finished, press the other batch size and repeat step #43.
45. When finished setting both batch sizes, press and release DONE. The display should read 2 BATCHES DONE?
46. Select YES. The screen should show the name of the recipe being programmed (modified) along with SETUP COMPLETE (except for ITCB w/Sweet meter, step # 47).

ASSIGN RECIPE to or disable BREW SWITCH(S)
This function allows the operator to assign a recipe to (or disable) each of the 3 brew switches (A, B, C). Any saved recipes listed under “REVIEW RECIPES” can be assigned to a brew switch. Only one recipe per brew switch is allowed.

Procedure to select switch recipes
1. Press and hold the right hidden switch until the display reads RECIPES. Press the corresponding button under select. Press hidden right switch until display reads ASSIGN RECIPE. Press SELECT.
2. The display should now read SELECT RECIPE BREW SWITCH A, and then REGULAR.
3. Using (-) and (+), scroll through the stored recipes in the brewer’s memory until the desired recipe name is reached.
4. Select DONE to set that recipe for brew switch A.
5. The display should now read SELECT RECIPE BREW SWITCH B, and then DECAF.
6. Using (-) and (+), scroll through the stored recipes in the brewer’s memory until the desired recipe name is reached.
7. Select DONE to set that recipe for brew switch B.
8. The display should now read SELECT RECIPE BREW SWITCH C, and then BREAKFAST BLEND.
9. Using (-) and (+), scroll through the stored recipes in the brewer’s memory until the desired recipe name is reached.
10. Select DONE to set that recipe for brew switch C.
11. Repeat steps 2 - 10 for right side of Twins.

Procedure to disable a Brew Switch:
1. Follow the same procedure as above. Choose DISABLED instead of recipe name.
2. Select DONE to disable that brew switch.
SET NEW RECIPE (COFFEE ONLY)
To set a new COFFEE recipe using a Smart Funnel and a G9-2T DBC or MHG Grinder:
This function allows the operator to set BREW VOLUMES, BYPASS %, PULSE BREW/PREINFUSION TIMES AND DRIP OUT TIMES for each coffee name stored in the grinder's memory.

Certain coffee names are stored in the grinder's memory. When a particular name of coffee is ground into the Smart Funnel, that name and the batch size selected are transferred from the grinder to the programming CHIP located in the funnel handle. The funnel is then inserted into the brewer's funnel rails. The SENSING COIL on the brewer reads the information contained in the handle. The name of the coffee flavor will then appear on the display. This allows the operator to set the BREW VOLUMES, BYPASS % (N/A on ITCB), PULSE BREW/PREINFUSION TIMES AND DRIP OUT TIMES for that particular coffee name. Each coffee name can be set individually to provide optimum brewing quality.

3. On the brewer, press and hold the right hidden switch until the display reads RECIPE, then press SELECT. Press and release the right hidden switch until the display reads SET NEW RECIPE.
4. Select YES. The display should read INSERT FUNNEL WITH NEW NAME, then QUIT SETUP? These two displays will repeatedly cycle.
5. Insert the funnel into the rails on the brewer (Left on Twins). The display should read the name of the coffee that was ground into the funnel, along with a NO and YES. If the name on the display is correct, press YES.
6. If, for some reason, the name of the coffee from the grinder did not load properly into the funnel, or if a grind has not yet been done, the display will read MUST GRIND INTO FUNNEL FIRST. It will be necessary to grind another batch following steps 1, 2 & 5.

NOTE: If brewer memory is full, the display will read RECIPE STORAGE AREA IS FULL and then REMOVE A FLAVOR? To remove a recipe press and release YES. Press NEXT to scroll through the stored recipes. When the display reads the name of the recipe to be removed, press and release REMOVE. The display will read REMOVE? Press CANCEL to exit the SET NEW RECIPE function. Press OK to remove that recipe. The display will then show BEGIN SETUP OF (COFFEE NAME).

7. If the grind is acknowledged by the brewer, the display will read BEGIN SETUP OF (COFFEE NAME). Then the screen will display BREW OZ and a batch light will be blinking. Follow steps on page 11 (Review Recipes) to adjust recipe settings.

* MODELS WITH FACTORY SWEETENER

Procedure for Setting the Recipe:
**NOTE:** Before beginning setup, place a server beneath the brew funnel.
1. Insert the funnel into the grinder and select the small batch size to grind. It is not necessary to have coffee beans in the hopper(s) in order to program the brewer. The coffee name is pre-selected and stored in the grinder’s memory for the side being ground.
2. Press the GRIND switch. When the grinder stops grinding, remove the funnel.
PROGRAMMING THE BREWER (cont.)
PROGRAMMING FUNCTIONS (cont.)

SET TEMP - ICB/ICB TWIN/ITCB/ITB
This function allows the operator to adjust the brew water temperature in the tank. This also sets the hot water faucet dispense temperature.

Procedure for setting the Set Temp
Range: 185° to 205° F (85° - 96° C)

1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SETTINGS, then press SELECT. Press the right hidden button until the display reads SET TEMP.
2. Using (-) and (+), adjust the brew and faucet temperature.
3. When finished, press and release DONE to save the new setting and to advance to the next function screen, READY DEGREE. Press ENABLE BREW ON/OFF switch to exit programming and return to the MAIN SCREEN.

READY DEGREE
This function allows the operator to set the minimum temperature allowable to start a brew cycle. The range can be from 2° to 20° F below the set temperature. The water must be at the READY temperature or higher for the display to indicate READY TO BREW. If brew lockout is enabled, the brewing process will not start below this READY temperature.

Procedure to set ready temperature
Range: 2° to 20° F (2° to 10° C) below set temp

1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SETTINGS, then press SELECT. Press the right hidden button until the display reads READY DEGREE.
2. Using (-) and (+), adjust the ready temperature.
3. When finished, select DONE to save the new setting and to advance to the next screen, ENABLE ADS. Press ENABLE BREW ON/OFF switch to exit.

ENABLE ADS
This function allows the operator to choose whether or not to display an advertising message. An ad can be saved to the brewer by either writing the ad using the programming commands, or by entering the ad into the brewer using an AD CARD. This message will be displayed when the brewer is not in use.

Procedure to Enable/Disable Ads:
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SETTINGS, then press SELECT. Press the right hidden button until the display reads ENABLE ADS. The YES or NO will be flashing to indicate the current selection.
2. Select NO to disable this function, or:
3. Select YES to enable this function.
4. When finished, select DONE to save the new setting and to advance to the next function screen.
5. If NO was selected, the display should now read ENABLE SANITATION. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.
6. If YES was selected, the display should now read NEW AD?. This screen allows the operator to select between using an ad card to read in a new ad, or writing an ad through the control panel.

Procedure to WRITE an Ad:
NOTE: Writing and saving a new ad will erase any previously saved ad in the brewer’s memory.

7. From the NEW AD? screen, select WRITE.
8. The display should now read 2 LINES 16 CHARs AVAILABLE, and then SCROLL THRU ALPHA, NEXT -> NEXT LETTER, and then WRITE TOP LINE?. The ad can be up to 32 characters long, 16 per line. The ad will be written in two steps, first the top line, then the bottom line.
9. To write the top line of a new ad, select YES. To skip the top line and only write a bottom line, select NO and proceed to step 13.
10. The display will now read A with a flashing cursor below it. Press the SCROLL button to scroll through the alphabet and available characters. When the desired character is shown on the display, select NEXT to move to the next character in the top line.
11. Repeat step 10 until the top line is complete.
12. Select DONE. The display should now read WRITE BTM LINE?
13. To write the bottom line, select YES.
14. To skip the bottom line, select NO.
   a. If neither a top nor bottom line was written, the display should now read ENABL SANITATION.
   b. If only a top line was written, the ad will be displayed followed by SAVE? Proceed to step 18.
15. The display will now read A with a flashing cursor below it. Scroll through the alphabet and available characters. When the desired character is shown on the display, select NEXT to move to the next character in the bottom line.
16. Repeat step 15 until the bottom line is complete.
17. Select DONE. The display will now show the written ad, and then SAVE?
18. To cancel saving the ad, select NO. The display should now read ADVERTISEMENT NOT SAVED! and then will return to the NEW AD screen.
19. To correct or edit the ad, select EDIT. The display should now read WRITE TOP LINE? Repeat steps 10 though 17.
20. To save the ad as it is shown, select YES. The display should now read ADVERTISEMENT SETUP COMPLETE, and then ENABL SANITATION. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.

Procedure to READ in a new Ad:

NOTE: Saving a new ad will erase any previously saved ad in the brewer’s memory.

7. From the NEW AD? screen, select CARD.
8. The display will show INSERT AD CARD. Place the AD CARD vertically so that the top end of the "chip" is beneath the sensing coil (located on the underneath side of the front display panel).
9. After a short pause, the display will read CARD CONTAINS AD. To view the ad, press and release SHOW. To save the ad to the brewer’s memory, select SAVE. To cancel, select QUIT.
10. After the ad is saved, the display will read AD MESSAGE SETUP COMPLETE.
ENABLE ENERGY SAVER
This function allows the operator to enable the ENERGY SAVINGS mode function and set the idle time. Once the set idle time has expired, the operator can choose to have the heaters either turn off, or reduce the tank holding temp to 140°F (60°C).

Procedure to enable energy savings mode:
Range: 0.5 to 24.0 hrs
If enabled, default setting is 140°F (60°C) tank temperature after 4.0 hrs. idle time.
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SETTINGS, then press SELECT. Press and release the right hidden switch until the display reads ENABLE ENERGYSAVR. The YES or NO will be flashing to indicate the current selection.
2. Select NO to disable or:
3. Select YES to enable this function.
4. When finished, press and release DONE to save the new setting and advance to the next screen.
5. If NO was selected, the display should now read EnableFreshTimer. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.
6. If YES was selected, the display should now read X.X HRS -> IDLE. This screen allows the operator to set the amount of time the brewer is not in use before energy save mode engages. Using (-) and (+), adjust the idle time. When finished, select DONE.
7. The display should now read AFTER IDLE TIME? Once the set idle time has expired, the heaters can either be shut off or held at 140°F.
8. To have the heaters shut off after the set idle time, select OFF and then DONE to save the settings. The display should read MACHINE OFF AFTER X.X HRS, and then EnableFreshTimer.
9. To have the temperature reduce to 140°F, select 140° and then DONE to save the settings. The display should read MACHINE AT 140° AFTER X.X HRS, and then EnableFreshTimer.
10. Once the idle time has expired, the display will read either ENERGY SAVER...NO TEMPERATURE or ENERGY SAVER...REDUCED TEMPERATURE, depending on the settings. This screen will alternate with PRESS ANY SWITCH TO RE-HEAT.

ENABLE FRESH TIMER
This function allows the operator to enable the Freshness Alert and set the expiration time. The expiration time is the amount of time the product is allowed to sit in the server/dispenser before a fresh batch is brewed.

Procedure for enabling/setting the Freshness Timer:
Range: Coffee 0.5 to 4.0 hrs
Hot Tea 0.5 to 8.0 hrs
If enabled, default setting is 2.0 hrs. for Coffee and 2.0 hrs. for Hot Tea.
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SETTINGS, then press SELECT. Press and release the right hidden button until the display reads ENABLE FRESHTIMER.
2. Select NO to disable or:
3. Select YES to enable this function (the unit will display a message once the set time has expired).
4. When finished, select DONE to save the new setting and advance to the next screen.
5. If NO was selected, the display should now read REFILL. To exit programming and return to the MAIN SCREEN, press either ENABLE BREW ON/OFF switch.
6. If YES was selected, the display should now read COFFEE. This screen allows the operator to set the amount of time from the end of brewing a batch of coffee until a Freshness Alert message will be displayed. Using (-) and (+), adjust the freshness time for coffee. When finished, select DONE.
7. The display should now read HOT TEA. Using (-) and (+), adjust the freshness time for hot tea. When finished, select DONE.
8. This display should now read REFILL. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.
9. Once the set time has expired, the display will read FRESHNESS ALERT BREW (A,B or C), and then FRESHNESS ALERT BREW FRESH BATCH alternating with the MAIN SCREEN.
10. Empty the server/dispenser the previous batch was brewed into and replace under the funnel.
11. Brew a new batch
12. The freshness timer will reset. The display should now return to the MAIN SCREEN.
PROGRAMMING THE BREWER (cont.)
PROGRAMMING FUNCTIONS (cont.)

REFILL
Range: 0 to 155
This function allows the operator to adjust the sensitivity of the refill circuit. This is mainly a troubleshooting feature. Water in different geographical locations can have different conductivities. By adjusting the sensitivity of the refill circuit, this will allow the brewer to operate under various water conditions.

Procedure to set the sensitivity threshold of the refill circuit:
NOTE: Make sure the water in the tank is touching the refill probe.
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SETTINGS, then press SELECT. Press and release the right hidden switch until the display reads REFILL and shows a number on both sides of the word.
2. To adjust the threshold setting, press (-) to decrease or (+) to increase the setting.

NOTE: Always make sure that the number on the right is larger than the number on the left when water is in contact with the refill probe in the tank.
3. When finished, select DONE. This saves the new setting and advances to the next function screen (L) SPRAY OZ/M. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.

SPRAY OZ/M
This function allows the operator to view or enter the actual flow rate coming out of each sprayhead. This is NOT used to control the actual flow rate, but to tell the internal processor how fast the water is flowing.

Procedure to set the sprayhead flow rate:
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads CALIBRATION, then press SELECT. Press and release the right hidden switch until the display reads SPRY OZ/M. The number represents what the brewer thinks is the flow rate out of that sprayhead.
2. If the actual flow rate of the sprayhead is known but is different than the number on the display, use the (-) and (+) to enter the correct flow rate.
3. Select DONE.
4. Repeat procedure for right side of Twins.
5. When finished, press and release DONE to advance to the next screen. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.

NOTE: If the flow rate is unknown, proceed to the CALIBRATE FLOW screen.

BYPASS OZ/M (ICB Twins SH only)
This function allows the operator to view or enter the actual flow rate coming out of each bypass fitting. This is NOT used to control the actual flow rate, but to tell the internal processor how fast the water is flowing.

Procedure to adjust the bypass flow rate setting:
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads CALIBRATION, then press SELECT. Press and release the right hidden switch until the display reads BYPASS OZ/M. The number represents what the brewer thinks is the flow rate out of that bypass.
2. If the actual flow rate of the bypass is known but is different than the number on the display, use the (-) and (+) to enter the correct flow rate.
3. Select DONE.
4. Repeat procedure for right side of Twins.
5. When finished, press and release DONE to advance to the next screen. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.

NOTE: If the flow rate is unknown, proceed to the CALIBRATE FLOW screen.
CALIBRATE FLOW
This function allows the operator to test and enter the actual flow rate of the sprayhead(s) and the bypass/dilution for each side of the brewer by dispensing each separately for one minute. The volumes are then entered into the brewer.

Procedure to calibrate the sprayhead flow rate:
1. Place a container, accurately graduated with a minimum capacity of 60 ounces, under the funnel.
2. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads CALIBRATION, then press SELECT. Press and release the right hidden switch until the display reads CALIBRATE, then press SELECT.
3. Select to advance to SPRAY HEAD CAL screen.
4. Select side to calibrate. The display should read CONTAINER READY? If container is under the funnel, select YES.
5. The display should read CALIBRATE SPRAY. Press any BREW button on the side to be calibrated to begin the flow for calibration. The display should read CALIBRATE SPRAY...60 SEC TO FINISH. The 60-second timer on the display will count down to zero. When the counter reaches zero, the display will change to LEFT or RIGHT OZ, along with a number.
6. Measure the amount of water in the container and using the (-) and (+), adjust the amount on the display to match the amount in the container. Then select DONE.
7. The display should now read NEW L or NEW R SPRY FLOW, along with the correct flow rate of the sprayhead. After about 5 seconds, the display will return to the CALIBRATE FLOW screen.
8. Repeat steps 1-7 to calibrate the other side.
9. To exit the CALIBRATE FLOW function and advance to the next screen, select NO. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.

Procedure to calibrate the bypass flow rate:
1. Place a container, accurately graduated with a minimum capacity of 60 ounces, under the funnel.
2. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads CALIBRATION, then press SELECT. Press and release the right hidden switch until the display reads CALIBRATE, then press SELECT.
3. Select to advance to BYPASS CAL screen.
4. Select side to calibrate. The display should read CONTAINER READY? If container is under the funnel, select YES.
5. The display should read CALIBRATE BYPASS. Press any BREW button on the side to be calibrated to begin the flow for calibration. The display should read CALIBRATE BYPASS...60 SEC TO FINISH. The 60-second timer on the display will count down to zero. When the counter reaches zero, the display will change to LEFT or RIGHT OZ/M, along with a number.
6. Measure the amount of water in the container and using the (-) and (+), adjust the amount on the display to match the amount in the container. Then select DONE.
7. The display should now read NEW L or NEW R BYPS FLOW, along with the correct flow rate of the bypass. After about 5 seconds, the display will return to the CALIBRATE FLOW screen.
8. Repeat steps 1-7 to calibrate the other side.
9. To exit the CALIBRATE FLOW function and advance to the next function screen, select NO. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.
Procedure to calibrate the dilution flow rate:
1. Place a container, accurately graduated with a minimum capacity of 130 ounces, under the funnel.
2. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads CALIBRATION, then press SELECT. Press and release the right hidden switch until the display reads CALIBRATE, then press SELECT.
3. Select to advance to DILUTION CAL screen.
4. Select side to calibrate. The display should read CONTAINER READY? If container is under the funnel, select YES.
5. The display should read CALIBRATE DILUTE. Press and release any BREW button on the side to be calibrated to begin the sprayhead flow for calibration. The display should read CALIBRATE DILUTE...60 SEC TO FINISH. The 60-second timer on the display will count down to zero. When the counter reaches zero, the display will change to LEFT or RIGHT OZ, along with a number.
6. Measure the amount of water in the container and use (-) and (+) to match the display to the amount in the container. Then select DONE.
7. The display should now read NEW L or NEW R DIL FLOW, along with the correct flow rate of the sprayhead. After about 5 seconds, the display will return to the CALIBRATE FLOW screen.
8. Repeat steps 1-7 to calibrate the other side. (For DDIL models)
9. To exit the CALIBRATE FLOW function and advance to the next screen, select NO. To exit programming and return to the MAIN SCREEN, press either ENABLE BREW ON/OFF switch.
BREW COUNTERS
This function allows the operator to track the total number of brew cycles completed, as well as the number of batches brewed using each of the brew buttons. There are (up to) six resettable counters, and one life counter that is not resettable.

Procedure to view/reset the brew counters:
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SERVICE, then press SELECT. Press and release the right hidden switch until the display reads BREW COUNTERS.
2. Pressing NO will advance to the next programming function. Select YES to view the first brew counter (TOTAL LIFE BREWS). This number represents the total number of brew cycles this brewer has completed. This counter is non-resettable. Press NEXT to advance to the next brew counter, << BREW A (left side).
3. This counter represents the number of brews for Brew A on the left side of the brewer. To reset the counter to zero, press and release RESET. Press and release NEXT to advance to the next counter.
4. Repeat step 3 for the remaining two left counters, BREW B and BREW C.
5. Repeat step 4 for the three right side brew counters. (Twin only)
6. When finished, press NEXT to advance to the next programming function, ENTER ASSET #. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.
PROGRAMMING THE BREWER (cont.)
PROGRAMMING FUNCTIONS (cont.)
ASSET NUMBER
This function allows the operator to enter the machine’s asset number. This can be useful for tracking the usage or service of an individual machine within a group.

Procedure to enter the asset number:
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SERVICE, then press SELECT. Press and release the right hidden switch until the display reads ENTER ASSET #?
2. Select YES. The display will now read ANXXXXXX.
3. Scroll down (-) or up (+), to set the asset number of the machine. NOTE: Starting from the right, each digit will control the next digit, like an odometer.
4. When finished, press and release DONE. The display will now read SERVICE #. To exit programming and return to the MAIN SCREEN, press ENABLE BREW ON/OFF switch.

NOTE: To view the Asset Number, press and hold the left hidden switch until the display reads ASSET NUMBER. After releasing the switch, the display will read SERIAL NUMBER then the software version.

SERVICE
(FOR AUTHORIZED SERVICE PERSONNEL ONLY)
This function allows the testing of individual components and the ability to check switches for proper function. This function also tests the funnel sensor coil’s frequency (diagnostic tool for troubleshooting purposes only). Refer to Service Manual for in depth procedures.

Test Outputs:
The following components can be individually tested:
- (L/R) Brew Valve(s)
- (L/R) Bypass Valve(s) ITCB HV/ICB(TWIN)
- (L/R) Dilution Valve(s) ITB/ITCB/HV (w/Dual Dilution)
- Refill Valve
- Tank Heater Relay
- Tank Heater Triac
- L/R Funnel Lock (Optional)
- Sweetener Solenoid (Optional)

Test Switches:
The following components can be individually tested:
- Membrane Switches

Test Frequency: (NOT AVAILABLE ON ITB)
The following components can be individually tested:
- L/R Smart Funnel read coils.

FACTORY DEFAULTS
This function allows the operator to erase ALL of the previously entered recipes and ad messages. Factory-set default values will replace ALL previous settings.

Procedure to set factory defaults:
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SERVICE, then press SELECT. Press and release the right hidden switch until the display reads FACTORY DEFAULTS.
2. Press YES to restore defaults. The display will read WILL REPLACE ALL BREW SETTINGS followed with ARE YOU SURE?
3. Selecting NO, will exit without resetting. Select YES to load the defaults. After factory defaults have been restored, the display will return to the MAIN SCREEN. The factory default values will have replaced ALL previously entered values. It will NOT reset the life brew counter. If factory defaults are restored, it will be necessary to recalibrate the flow rates.

SERVICE NUMBER
This function allows the operator to enter in the telephone number to call if service is needed. The service number will be displayed anytime there is a fault message displayed.

Procedure to enter the service number:
1. Press and hold the right hidden button until the display reads RECIPES. Press the right hidden button until the display reads SERVICE, then press SELECT. Press and release the right hidden switch until the display reads ENTER SERVICE #?
2. Press and release YES. The display will now read SCROL THRU #'S NEXT -> NEXT NUMBER, followed by 000-000-0000. UP TO 16 CHARACTERS ARE AVAILABLE.
3. Press the SCROL button to scroll through the numbers. When the desired number is shown, press and release NEXT to move to the next digit in the phone number.
4. Repeat Step 3 until the entire number is entered.
5. Press and release DONE. The display will now read BREW COUNTERS.
USB Flash Drive Programming:

The port on the right side of the hood allows a user to update software on brewer.

Procedure for copying settings from one brewer and loading onto a brewer of the same model.
1. Insert empty flash drive into brewer. Screen should read “USB DETECTED” and then read “SAVE TO.” Select “USB” which will be the only option.
2. When finished the screen will read “SAVE COMPLETE REMOVE DRIVE.” Remove the flash drive.
3. When in front of the next brewer, insert flash drive into brewer.
4. The screen should then read “USB DETECTED” and then read “SAVE TO.” Select “BREWER” and the screen will read “Please Wait” as it is saving the settings to your brewer. When completed the screen will read “SAVE COMPLETE REMOVE DRIVE.”

Procedure for loading new software versions into brewers.
1. Place new software file from computer onto empty flash drive.
2. Insert flash drive into brewer. The screen should read “USB DETECTED” and then “Fil Infus###.## PROGRAM?”. Select “YES” and the screen will read “Please Wait” as it is saving the settings to your brewer. When completed the screen will read “SAVE COMPLETE REMOVE DRIVE.”

Procedure for loading recipe into brewers.
1. Place recipe file from computer onto empty flash drive.
2. Insert flash drive into brewer. The screen should read “USB DETECTED” and then read “SAVE TO.” Select “BREWER” and the screen will read “Please Wait” as it is saving the settings to your brewer. When completed the screen will read “SAVE COMPLETE REMOVE DRIVE.”
TROUBLESHOOTING

A troubleshooting guide is provided to suggest probable causes and remedies for the most likely problems encountered. If the problem remains after exhausting the troubleshooting steps, contact the Bunn-O-Matic Technical Service Department.

• Inspection, testing, and repair of electrical equipment should be performed only by qualified service personnel.
• All electronic components have 120-240 volt ac and low voltage dc potential on their terminals. Shorting of terminals or the application of external voltages may result in board failure.
• Intermittent operation of electronic circuit boards is unlikely. Board failure will normally be permanent. If an intermittent condition is encountered, the cause will likely be a switch contact or a loose connection at a terminal or crimp.
• Solenoid removal requires interrupting the water supply to the valve. Damage may result if solenoids are energized for more than ten minutes without a supply of water.
• The use of two wrenches is recommended whenever plumbing fittings are tightened or loosened. This will help to avoid twists and kinks in the tubing.
• Make certain that all plumbing connections are sealed and electrical connections tight and isolated.
• This brewer is heated at all times. Keep away from combustibles.

WARNING – • Exercise extreme caution when servicing electrical equipment.
• Unplug the brewer when servicing, except when electrical tests are specified.
• Follow recommended service procedures.
• Replace all protective shields or safety notices.

<td></td>
<td>2. Temperature probe</td>
<td>Remove the probe from the grommet and submerge in a water bath of approximately 70°F (21°C). Connect an ohmmeter to the pins in the connector. At 60°F (16°C), the reading should be 15.3k ± 2k OHMS, at 70°F (21°C) the reading should be 11.8k ± 2k OHMS, and at 80°F (27°C) the reading should be 9.3k ± 2k OHMS. If the probe is within these parameters, reconnect to the control board.</td>
</tr>
<tr>
<td></td>
<td>3. Tank heaters</td>
<td>Remove power from the brewer. Check for continuity through the tank heaters. If no continuity is present, check for a wiring problem (consult wiring schematic), then replace the tank heater if no wiring problem is found.</td>
</tr>
<tr>
<td></td>
<td>4. Control Board</td>
<td>Remove power from the brewer. Connect a voltmeter across the tank heater. Reapply power to the brewer and refer to testing outputs. If the voltage measured when the tank heater is turned on is very low or zero, then substitute a control board know to be good working order.</td>
</tr>
